However, some figures and Supplemental Material published in *EHP* articles may not conform to [508 standards](#) due to the complexity of the information being presented. If you need assistance accessing journal content, please contact ehp508@niehs.nih.gov. Our staff will work with you to assess and meet your accessibility needs within 3 working days.

Supplemental Material

Childhood Exposure to Ambient Air Pollutants and the Onset of Asthma: An Administrative Cohort Study in Québec

Louis-Francois Tetreault, Marieve Doucet, Philippe Gamache, Michel Fournier, Allan Brand, Tom Kosatsky, and Audrey Smargiassi

Table of Contents

Indirect adjustment for second hand smoke

Table S1. Distributions of estimated annual average concentrations of PM_{2.5} and O₃ at both the annual and the birth address in the Montreal sub-cohort

Table S2. Associations between asthma onset and air pollutant levels in Quebec, per increase of an interquartile range in air pollutant levels, without regions of the province where health services may be under-reported

Table S3. Associations between asthma onset and time-varying air pollutant levels, per increase in interquartile range, restricted to non-movers

Table S4. Associations between asthma onset and air pollutant levels, per increase of an interquartile range in air pollutant levels, with reconfirmation of onset when it occurred before the age of five

Table S5. Associations between asthma onset and air pollutant levels, per interquartile range increase in air pollutant levels, stratified by sex

Table S6. Associations between asthma onset and air pollutant levels in Quebec, per increase in interquartile range of pollutant levels, stratified by region

Figure S1. Distribution of the potential bias introduced by second hand smoke on the association between onset of asthma on the island of Montreal and air pollutant levels of: NO₂ (for the years 1996 to 2006) B) PM_{2.5} (for the years 1996 to 2006) and C) O₃ at the birth address (for the years 1999 to 2006)
